## Professional Computer Cleaning Service

We help business to improve health and wellbeing at their workplaces nationwide.

### Issues

Bacteria, allergens, germs, and other microbes are the common inhabitants of a regular office environment. Employees, customers, and visitors can easily spread diseases by simply touching the surface of the germs infected computer equipment, keyboard, or telephone set.

### Challenges

The traditional office cleaning companies are either unaware or untrained & unequipped to clean the office computers with modern-day hygiene compliance standards.

### Solutions

At Computer Cleaning, we understand the office's modern-day hygiene requirements. We adhere to computer manufacturers standard and guidelines for cleaning procedures. We use the industry approved cleaning products and apply green cleaning solutions where possible. We have state-of-the-art cleaning equipment and suitable products. Our cleaners are insured, well trained, and background security checked.

### Our Promise

- We do what we say we will do.
- At Computer Cleaning, we believe in the strategic relationship with the business.
- Whether you require one-off cleaning or regular cleaning we will give attention to the details and provide you with great customer service.
- Because of competitive prices and great customer experience, a large number of our customers are either returning or referral customers.

# Our Specialist Services

## Computer Surface Cleaning

Computer surface cleaning refers to the removal of dirt, dust, breadcrumbs and other debris from the surface of computer equipment. By surface cleaning, colours become more vibrant and previously unseen aspects of the computer equipment become more visible. Anti-static cleaning brushes, microfiber towels, dust sucking machines, computer wipes, and compressed air are used to accomplish these tasks. In computer sanitisation, over 99.99% of specific bacteria is killed using antibacterial solutions.

## Keyboard Cleaning

Dirt, dust, breadcrumbs and other debris are gently loosened and removed from the keyboard. Special anti-static cleaning brushes designed for electronic equipment cleaning are run through between the keys of the keyboard. Compressed air can and air dusters are used to remove bits and pieces stuck between the keys. Special anti-static dust sucking pumps and keyboard vacuum cleaners are used to extract dust from the keyboard. Finally, keyboards are polished with antibacterial solutions to protect against bacteria and germs.

## Laptop Cleaning

Compress air spray is used to loosen the gunk that is stuck between the keys of the laptop. The laptop vents are also cleaned the similar way to allow fresh cool air to the circuit board of the laptop to avoid overheating. Special anti-static dust sucking pumps are used to extract dust from the laptop. The laptop display screen is cleaned with the industry recommended screen cleaning wipes and cleaning solutions. Once thoroughly cleaned, the antibacterial solution is applied to provide protection against bacteria and germs.

## Monitor Screen Cleaning

Monitor screens are cleaned using high-quality anti-static cleaning solutions and micro-fibre cloth. Dirt and dust are first wiped from the screen, and then the computer screen cleaning solution is applied to remove grease and smudges leaving the screen residue free. Fingerprints marks and other oily scratches are removed. The monitor screen holding frame, stand, and air vents at the back of the monitor equipment are thoroughly cleaned. We clean all kind of monitor screens including LCD, LED, VDU, or flat-panel display screens.

## Deep Cleaning Cleaning

Computer deep cleaning is an exceptionally intense cleaning process. In this process dirt, dust, breadcrumbs and other debris cleaned from the computer throughout. In deep cleaning attention to details is essential because the primary focus is on the removal of dust and debris stuck inside the computer vents and other internal parts. This is a more labour intensive cleaning process and requires special knowledge and cleaning tools. In the inside out cleaning dust is removed from a computer using a dust extraction machine. The air extraction pump sucks out the dust build-up inside the computer. A compressed air can in conjunction with a special vacuum cleaner is used to give a computer a perfect clean.

## Office Telephone Cleaning

Computer and telephone cleaning service is the most frequently requested service that we receive from our clients on regular basis. Like other computer related cleaning services office telephones are given the same cleaning attention. The telephone hand receiver, handset, and dialling pads are thoroughly cleaned. Dust and other oily residue are removed from the phone display screen. The buttons and keys on the dialling pad of the telephone set are deep cleaned and finally, the surface is polished with the antibacterial solution.
